

DISABLING POP-UP BLOCKERS

Checking for pop-up blockers:

1. Go to your internet browser
2. On the menu bar click **View > Toolbars >** If you have browser toolbars (AOL, Google, MSN, etc.) they will be listed. If there is a check mark next to the toolbar name it indicates that the toolbar is visible on your browser page. If not, click to place a check mark next to the toolbar name to make it visible (you can un-check later if you do not want to view the toolbar). Listed below are the most popular pop-up blockers and how to manage them from the toolbars.
3. If you did not find any toolbars listed, click **Tools** on the menu bar: If you have blockers, you will see Pop-up blocker listed and a sub-menu to turn on or turn off (the wording may vary based on your browser). The name of blocker is usually not listed here – this can happen when things download that you are not aware of!

Norton Internet Security

1. Double Click on the Norton Icon(pictured below) in the System Tray
2. Click 'Ad Blocking'
3. Click 'Turn Off'
